PROFESSIONAL SUMMARY

Staff Data Analyst with 8+ years of experience building data products, ETL pipelines, operational intelligence systems, and full-stack internal tools across automotive, logistics, supply chain, and service engineering. Hands-on with Python, SQL, Spark, AWS, React, Next.js, TypeScript, Tableau, Hex, and graph-based visualization systems. Operates at the intersection of data engineering, analytics engineering, AI-assisted development, and internal platform building to convert ambiguous operational problems into scalable decision systems.

PROFESSIONAL EXPERIENCE

Rivian | Staff Data Analyst, Service Engineering

Jan 2022–Present

Palo Alto, CA

- Architected a Service and Remanufacturing BOM lakehouse with approximately **10 dbt models** and reusable macros across R1T, R1S, R2, off-vehicle, battery, and drive-unit programs; supported **8,000–10,000 weekly queries** and reduced part and supersession analysis time by **30–50%**.
- Automated supersession-audit triage with a nightly Spark job that compared BOM revisions, opened JIRA issues with lineage snapshots, and logged results to a root-cause-analysis mart; detected **98% of issues** and cut the resolution SLA from **7 days to under 48 hours**.
- Built a live wiring-design visualizer with Next.js, TypeScript, React Flow, and Python to render harness, ECU, connector, and signal relationships, reducing manual debugging effort by **40%** and supporting **five cross-functional teams**.
- Modeled service procedure, labor-code, and operational workflow relationships as interactive graphs, exposing dependencies previously hidden in tabular data for repair planning and impact analysis.
- Shipped PowerApps workflows for remanufactured-part genealogy, teardown, and rebuild tracking, maintaining operational continuity while deferring an estimated **\$6M MES investment**.
- Consolidated service-repair KPIs and root-cause signals in Hex and Tableau, improving labor allocation and increasing technician utilization by **20%**.

RH | Business Analyst, Supply Chain Strategy & Analytics

Nov 2020–Jan 2022

Corte Madera, CA

- Built executive-facing Tableau dashboards for Linehaul and Parcel Operations KPIs and automated Parcel Over Max Scan detection with Python and SQL, recovering an estimated **\$250K in quarterly carrier credits**.
- Developed a dynamic ocean-lane transit matrix that adjusted lead times from shipment history, improving delivery forecasting and on-time planning.
- Administered Tableau Server for **100+ users**, optimizing performance, managing access, resolving issues, and training teams on self-service analytics.

Tesla | Data Analytics, Logistics

Oct 2018–Aug 2020

Fremont, CA

- Built and maintained **60+ Tableau dashboards** connected to SQL databases across Production Inbound, Finished Vehicles, Service, and E-Commerce, generating **50,000+ stakeholder views**.
- Architected Python ETL pipelines for logistics reporting, reducing manual reporting effort by **30+ hours per week** and improving reliability of operational metrics.
- Analyzed FTL shipment utilization with **3,000+ lines of SQL** and cube-optimization logic, improving freight capacity usage and reducing transportation waste.
- Led logistics cost-reduction analysis across route monitoring, carrier contracts, and scheduling, contributing to **\$600K** savings within nine months.

Tesla | Data Analytics, Logistics (continued)

- Developed fuzzy-matching Python workflows to clean redundant logistics location records, improving data quality for downstream reporting.
- Built driver-tracking logic to monitor in-transit status and optimize load allocation, reducing average driver wait time from **3 hours to 1.5 hours**.

Tesla | Data Analyst Intern, Inventory Control

Jan 2018–Aug 2018

Fremont, CA

- Built a Tableau and SQL cycle-count tracker for Finance and Operations and analyzed systematically adjusted parts to prioritize inventory corrections.
- Supported factory-wide Model 3 inventory reconciliation, improving alignment between recorded and physical inventory and reducing discrepancies.

IBM | Business Analyst, SAP Supply Chain

Feb 2014–Nov 2015

Bangalore, India

- Led SAP MM configuration and deployment for RED BEE Media's UK operations, mapping procurement and warehouse requirements into system workflows that reduced inventory discrepancies and improved warehouse efficiency.
- Improved procurement, scheduling agreement, and subcontracting workflows for enterprise supply chain clients, reducing planning errors and inventory holding costs.
- Automated SLA reporting using Excel macros and pivot-based workflows, reducing manual reporting effort by **40%**.

TECHNICAL SKILLS

Data Engineering: Python, SQL, Databricks, Spark, dbt, ETL/ELT, data modeling

Analytics & Visualization: Tableau, Hex, Apache Superset, Power BI, KPI design, D3.js, graph visualization

Internal Tools: TypeScript, JavaScript, Next.js, React, React Flow, PowerApps

Cloud & Databases: AWS S3, Redshift, Lambda, Fargate, PostgreSQL, MySQL, SQL Server

Collaboration Tools: Git/GitHub, Jira, Confluence

EDUCATION

Texas A&M University | M.S., Industrial Engineering

Aug 2018 | College Station, TX

KIIT University | B.S., Mechanical Engineering

May 2013 | Bhubaneswar, India
